System Installation Steps

1st Step – Install Web Server

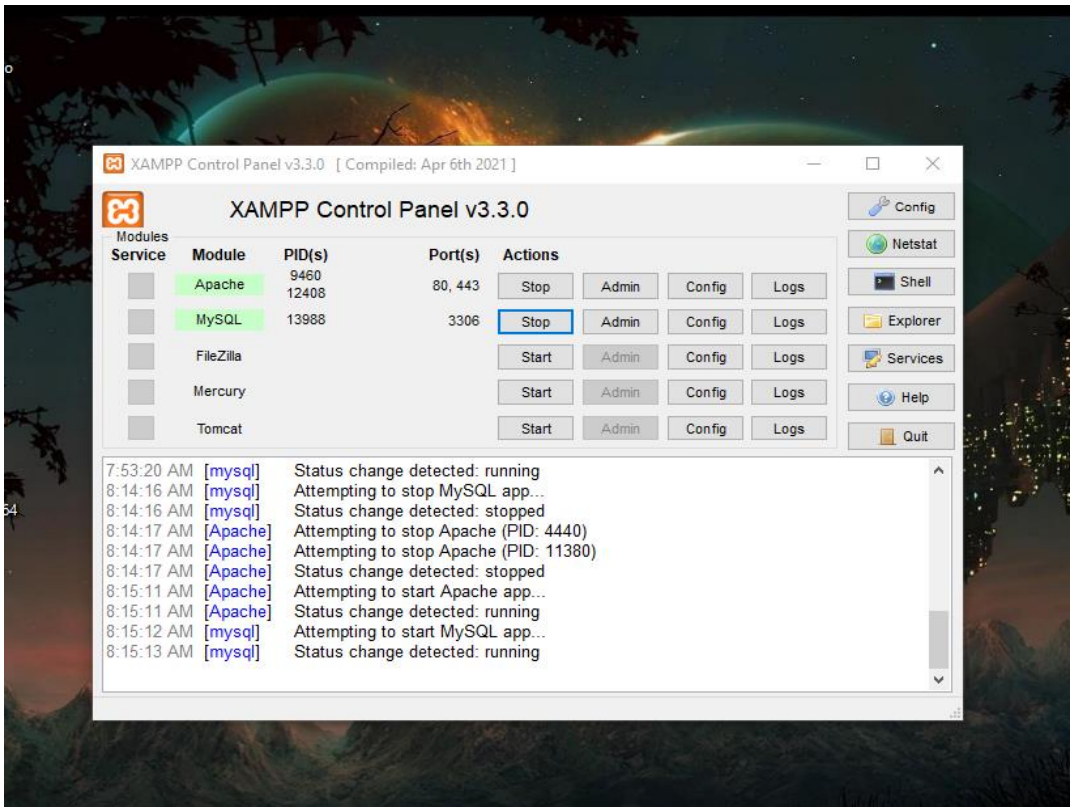
- Download and install XAMPP Control Panel.

2nd Step – Install Web Browser

- Download and install any latest web browser. Google chrome is recommended.

3rd Step – Run Web Server and Database Server

- After download XAMPP panel and web browser, first run XAMPP control panel.
- Then click on the start buttons for Apache and MySQL. They will then be highlighted in green color as shown below.



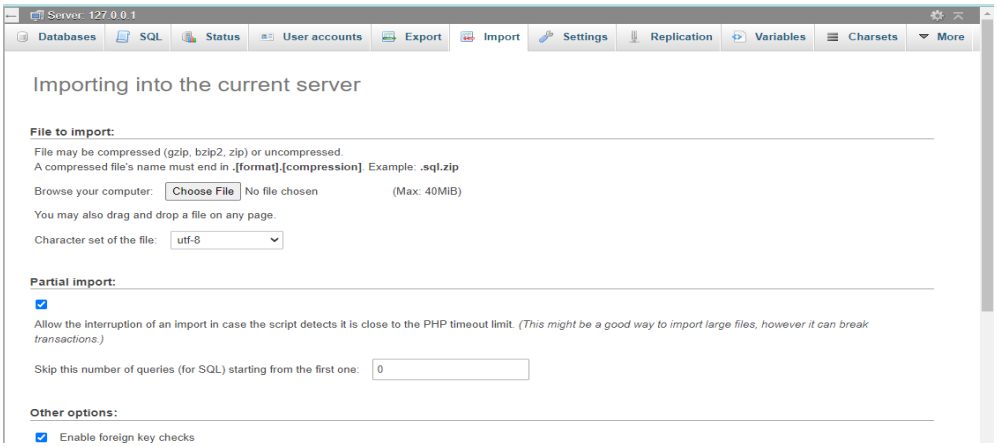
4th Step – Extract Files

- Copy paste and extract downloaded **btms.zip** file to the **xampp** >> **htdocs** directory where xampp is installed on the computer.

5th Step – Import Database

- After run Web server and Database server, then run Web browser.
- Type **localhost/phpmyadmin** on the URL bar and press Enter. You will see new interface.
- Then click **new** and enter database name as **btms** on the create database field and click **create** button. Created database can be seen in the database pile on the left hand side.

- Then click on it. You will see as below. Then click on the **import** option in the top menu bar, and choose system database file correctly(btms.sql) and then scroll down, click **Go** button. The database will successfully imported in a short time.



6th Step – Run Application

- Finally close the current tab on the browser, open a new tab, copy and paste **http://localhost/btms** on the URL bar and press Enter. You will see the system login page.
- **Admin Login Credentials:**

  Username: jcdilshan

  Password: abcd123
